This invention describes a novel preparation of an agent (A) for CC detection, prevention and/or treatment of microbial infection by: (i) identifying essential genes (I) and corresponding polypeptides (II); (ii) identifying compounds that are directed against (II) and CC inactivate the microbe; (iii) testing these for suitability for use; and CC (iv) formulating selected (A). Identifying essential genes (I) comprises (IV) formulating selected (A). Identifying essential genes (I) comprises (IV) perparation of gene-deficient microorganisms by conditional antisense (IV) formulating viability and/or survival of the deficient organisms. (IV) for products of the invention have antibacterial activity. (A) (which may be a nucleic acid (Ia), vector or host cell containing (Ia), derived (II) polypeptide (IIa), or fragments, (IIa) reparticularly used for diagnosis, (IIa) and (IIa) are used in DNA, subunit or live vaccines. The method (IIa) and (IIa) genes including those that have homology in other (III) specific antibody in other (III) can be screened quickly, in an automated process, and the intertifical can be screened quickly in an automated process, and the intertifical can be screened quickly in an automated process, and the intertifical can be screened quickly in an automated process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δÃ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence encodes a H. pylori outer membrane protein.

The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-APR-1996;

                                                                                                                                                                                                                                                                            antibody-detection assays, on sera, plasma, urine, saliva etc., they highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antig are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAV90653 standard; DNA; 770

                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In

The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New Helicobacter pylori antigens and related nucleic acid sequences - useful in serological diagnosis and protective vaccines, providing long-lasting immune response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       14-OCT-1997;

                                                                                                                                                                                                                      This sequence represents Omp22, a novel gene encoding an outer membrane protein which exhibits antigenicity and immunogenicity against Helicobacter pylori. This bacterium is associated with inflammation of the stomach and gastritis related diseases e.g. peptic ulcers and gastric cancer. Omp22 could be used in immunological therapy as a H. Pylori-specific antigen for the treatment and prevention of diseases associated with this microorganism e.g. as the active

The proteins are predicted to be immunogenic and may therefore be cuseful in vaccine production and for diagnostic purposes. Chlamydia pneumoniae is a common cause of respiratory disease in humans, and is calso involved in the development of cardiovascular diseases such as composed in the development of cardiovascular diseases such as composed in farction, cerebrovascular disease, carotid artery stenosis, composed in receivable of the invention claudication and stroke. The proteins and nucleic acids of the invention composed in vaccines and pharmaceutical compositions for the prevention or treatment of chlamydial infections, particularly Chlamydia pneumoniae infections. The proteins may also be used in the detection of chamydia probe assay or blotting techniques for determining Chlamydia pneumoniae gene expression. The present sequence represents a compositically claimed DNA which encodes a Chlamydia pneumoniae protein of the invention.

                                                                                                                                                                                                                          Query
                                                                                                                                                                                                                                          Best Local Similarity:
                                                                                                                                                                                                                                                          Percent Similarity:
                                                                                                                                                                                                                                                                                                          Alignment
                                                                                                                                                                                                                                                                                                                                                                                           or express it in a non-toxic, mutated form. The omp P6 probes are useful in diagnostic tests as capture or detection probes and the primers are useful in diagnostic methods involving PCR (polymerase chain reaction).
                                                                                                                                                                                                                                                                                                                                                                                                                                        of omp P6 precursor protein and their corresponding DNAs are useful in vaccine composition. The polynucleotide is useful in the construction of attenuated Chlamydia strains that can over express the polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             protein (omp) P6 precursor gene. The omp P6 precursor polynucleotide, polypeptide and its antibody are useful for detecting, preventing and treating chlamydia infections e.g. pneumonia, upper respiratory tract diseases (e.g. bronchitis, sinusitis) and acute respiratory diseases (e.g. cough, sore throat). C. pneumoniae infection is also observed to be associated with atherosclerosis and asthma. Immunogenic fragments
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is Chlamydia pneumoniae outer membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 2;

                                                                                                                                                                                                                         The present sequence represents the complete genome of Chlamydia pneumoniae, and encodes proteins AAY34584-Y35879. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δõ
 The present sequence represents the complete genome of Chlamydia trachomatis. Open reading frames (ORFs) of the genome encode polypeptides AAY36754-Y37949. The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, peeindymitis, cervicitis, salpingitis, perihepatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in trachoma diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is that of DNA encoding BASB113 protein (see AAB20105) of Moraxella catarrhalis Mc2931 (ATCC 43617), a causative agent of otitis media in children and pneumonia in adults. The DNA was obtained from M. catarrhalis plasmid DNA by PCR amplification (see also AAF30044-45). The invention provides BASB113 polypeptides, and polynucleotides encoding them, as well as expression vectors, host cells and methods for producing BASB113 expression vectors, most cells and methods for producing BASB113 polypeptides using recombinant methods. Also claimed is a vaccine composition comprising a BASB113 polypeptide, an immunogenic fragment of a BASB113 polypeptide, or a polypeptide having at least 85% amino acid sequence identity to BASB113, or comprising a polypeptide are the productive comprising a polypeptide mathod of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            polynucleotide encoding such a polypeptide. A claimed method of diagnosing a Moraxella infection involves identifying a BASB113 polypeptide or antibody. A claimed therapeutic composition useful in treating humans with M. catarrhalis infection comprises at least lantibody directed against a BASB113 polypeptide. BASB113 polynucleotides also have utility in diagnosis of the stage and type of infection, and also for therapeutic or prophylactic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 10; Page 67; 86pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
This sequence represents the complete genome sequence of the bacterium Haemophilus influenzae strain Rd. The invention relates to a computer readable medium (CRM) having recorded upon it the complete H.influenzae nucleotide sequence (I), a representative fragment of (I) or a nucleotide sequence at least 99% identical to (I). By providing the full-length genomic sequence in a computer readable form, it is possible to identify

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         commercially important nucleic acid fragments and expression modulating fragments (EMFs) of the Haemophilus genome. The EMFs can be used to regulate the expression of a nucleic acid molecule. Vectors and altered organisms comprising the predicted ORFS can be used to produce any of the polypeptide fragments of the H. influenzae Rd genome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence of plasmid pRW3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      plasmid pRW3 contains the whole P.aeruginosa outer membrane protu-
oprF gene with a mutated promoter in pTZ19R. It was isolated for
the creation of OprF epitope insertion vectors which include a
promoter and a DNA sequence encoding at least the amino terminal
portion of a P.aeruginosa OprF. Inserted in the DNA sequence are
one or more unique restriction sites for insertion of one or more

                                                                                                                                                                                                        A cDNA sequence (AAT32599) codes for amino acids 190-350 (AAR99625) of the Pseudomonas aeruginosa ATCC 3334 outer membrane protein F (OprF), i.e. the C-terminal region of protein Protein. It was obtd. by PCR amplification of the OprF gene in plasmid pFSauI (see also AAT32592-93). A hybrid gene between glutathione-s-transferase and the OprF sequence was expressed in Escherichia coli. OprF-OprI (AAT32500) and OprI-OprF (AAT32600) hybrid genes were constructed and the encoded proteins (AAR99626-27) were tested for their efficacy as vaccines against P. aeruginosa infection.

                                   A cDNA sequence (AAT34419) codes for a fusion (AAR99627) between amino acids 21-83 of the outer membrane protein I (oprI) and amino acids 190-350 of outer membrane protein F (oprF) of Pseudomonas aeruginosa ATCC 33354, the 2 moleties being separated by a dipeptide linker. A glutathione-S-transferase fusion with the hybrid gene was expressed in Escherichia coli and Saccharomyces cerevisiae transformants. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The protein is isolated from the OMP of P. aeruginosa serotype 6 ATTCC 33354) and purified by HPLC. The amino-terminal and trypsin fragments are sequenced and a series of oligonucleotide probes constructed corresponding to the established sequences. These probes used to screen a gene bank of 15-20 kb fragments of genomic DNA in lambda EMBL 3. One positive clone includes a 15 kb insert conty. the protein gene, which can be isolated as a 2.5 kb PstI fragment. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    fragment cannot be cloned int a high copy no. vector because of the toxicity of the gene prod.., so is subcloned as two fragments with an overlapping region of about 500bp. Ab's are raised by usual immunisation or cell-fusion procedures. The DNA is useful in diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Domdey H,

                                                                                                                                                                                      CC membrane protein, CompA2, from Actinobacillus pleuropneumoniae (APP)
CC strain p2420 (ATCC 98930). The invention relates to the novel APP outer
CC membrane proteins Omp210, OmpA1 and OmpA2 (AAY97996-y97900)
CC and to nucleic acids encoding them (AAA38554-A38589). APP is a Gram
CC negative coccobacillus which is one of the most important swine
CC pneumonic pathogens. 12 different serotypes of APP have been recognised
CC which vary in geographic distribution. Prior art attempts at vaccinating
CC against APP have produced mainly serotype-specific immune responses. In
CC contrast, natural immunity to any one serotype seems to confer
CC significant protection from disease caused by other serotypes, suggesting
CC The novel outer membrane proteins of the invention are present in all 12
CS errotypes, and may provide a target for cross-protective immunity to shared antigens.
CC The novel outer membrane proteins and nucleic acids encoding them can be
CC used as a vaccine against APP in swine. They can also be used as
CX reagents for the diagnosis of APP infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 32
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CDS

The present invention relates to virulence genes from Pasteurellaceae. The present sequence is one such virulence gene. The present sequence may be mutated in order to produce an inactive gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The fimbrin proteins from 15 randomly selected type b and non-
typable clinical isolates of Haemophilus influenzae share common
epitopes. Thus frimbrin isolated from non-typable Haemophilus
influenzae 1128 Strain is a particularly suitable immunogen to
protect against the different non-typable HJ. influenzae that cause
otitis media. Fimbrin protein is produced by culturing a transformed
microbial host, pref. E.coli, Sporodoptera frugiperda or a mucosal
pathogen. Fimbrin protein (FP) produced by this process is claimed.
The FP protein migrates in polyacrylamide genes to a posn. equiv. to
a mol. wt. of 25.5 kD or 37.5 kD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Vaccine comprising non-typable Haemophilus influenza fimbrin protein - useful in studying, preventing or reducing the severity of otitis media, also fimbrin protein and DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1720

                                               The present invention provides the protein and coding sequences of proteins from Moraxella catarrhalis. These can be used to produce vaccines which protect against M. catarrhalis infection, which can otitis media, respiratory infection, sinusitus, and pneumonia. The present sequence is a coding sequence of the invention.

The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large aerobic, gram-negative diplococcus, normally found among the bacterial flora of human upper airways. M. catarrhalis is known to cause acute, localised infections such as otitis media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis

                                                                                                                                                                                     The present sequence is that of the coding region of the hagA gene CC of Haemophilus paragallinarum strain 2403 (serovar A). The gene CC was isolated from chromosomal DNA by PCR amplification. It encodes haemagglutinin (see AAM50718). The invention provides cencodes haemagglutinin (see AAM50718). The invention provides cencoding nucleic acids (see AAM501417-27) from 11 strains (serovars A, B and C) of H. paragallinarum, the causative agent of infectious coryza of chickens. The polypeptides are useful in vaccines for coryza of chickens. The polypeptides are useful in vaccines for mmunisation against infectious coryza, as are the nucleic acids when expressed in attenuated bacteria, especially Salmonella or CC wropalsama (claimed). The recombinant polypeptide is preferably the mature protein, or a biologically active fragment, variant or CC derivative, that is capable of eliciting an immune response, providing protection against one or more strains of H. CC paragallinarum in chickens. Also claimed are methods of using the haemagglutinin polypeptides and nucleic acids for detection and

    The present sequence is that of the coding region of the hagA gene of Haemophilus paragallinarum strain 0222 (serovar B). The gene was isolated from chromosomal DNA by PCR amplification. It encodes haemagglutinin (see AAM50721). The invention provides recombinant haemagglutinin polypeptides (see AAM50716-27) and encoding nucleic acids (see ABA91417-27) from 11 strains (serovars A, B and C) of H. paragallinarum, the causative agent of infectious coryza of chickens. The polypeptides are useful in vaccines for when expressed in attenuated bacteria, especially Salmonella or Mycoplasma (claimed). The recombinant polypeptide is preferably the mature protein, or a biologically active fragment, variant or derivative, that is capable of eliciting an immune response,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   coryza of chickens. The polypeptides are useful in vaccines for immunisation against infectious coryza, as are the nucleic acids when expressed in attenuated bacteria, especially Salmonella or Mycoplasma (claimed). The recombinant polypeptide is preferably the mature protein, or a biologically active fragment, variant or derivative, that is capable of eliciting an immune response, providing protection against one or more strains of H. paragallinarum in chickens. Also claimed are methods of using the haemagylutinin polypeptides and nucleic acids for detection and diagnosis of infectious coryza in chickens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of the coding region of the hagA gene of Haemophilus paragallinarum strain 2671 (serovar B). The gene was isolated from chromosomal DNA by PCR amplification. It encodes haemagglutinin (see AAM50722). The invention provides recombinant haemagglutinin polypeptides (see AAM50716-27) and encoding nucleic acids (see ABA91417-27) from 11 strains (serovars encoding nucleic acids (see ABA91417-27) from 11 strains (serovars and C) of H. paragallinarum, the causative agent of infectious A, B and C) of H. paragallinarum, the causative agent of infectious A.

   The present sequence is that of the coding region of the hagA gene of Haemophilus paragallinarum strain H-18 (serovar C). The gene was isolated from chromosomal DNA by PCR amplification. It encodes haemagglutinin (see AAM50724). The invention provides recombinant haemagglutinin polypeptides (see AAM50716-27) and encoding nucleic acids (see ABA91417-27) from 11 strains (serovars A, B and C) of H. paragallinarum, the causative agent of infectious coryza of chickens. The polypeptides are useful in vaccines for immunisation against infectious coryza, as are the nucleic acids when expressed in attenuated bacteria, especially Salmonella or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ABA91425 standard; DNA; 1035

The recombinant polypeptide is preferably the mature protein, or a biologically active fragment, variant or derivative, that is capable of eliciting an immune response, providing protection against one or more strains of H. paragallinarum in chickens. Also claimed are methods of using the haemagglutinin polypeptides and nucleic acids for detection and diagnosis of infectious coryza in chickens.

Shetty,J., Malek,J., Koo,H., Collins,F., Gardner,M. and Loftus,B.J. Direct Submission of BAC-end sequences from Anopheles gambiae
to minimize the inclusion of DNA from microorganisms that inhab the gut. The DNA is derived from mixed sexes of larvae. The BAC library was constructed at Texas A&M University BAC Center University, College Station, Texas 77843-2123, USA using a Hind.
                                                                               This clone is from an A gambiae BAC library (ND-TAM) provided by F.H. Collins and sequenced by The Institute for Genomic Research (TICR). The BAC library was generated from A. gambiae PEST strain DNA. All DNA was extracted from newly hatched first instar larvae
